

Chemical Resistance of Bochem LabSteel

Index

Classification

0 = resistant to general corrosion (mass loss rate <0.1g/h m² corresponding to a corrosion rate <0.11mm thickness reduction/year)

1 = slight susceptibility to general corrosion, suitable for some applications (0.1–1.0 g/h · m² corresponding to 0.11–1.10 mm thickness reduction/year)

2 = low resistance to general corrosion, unsuitable for virtually all applications (1.0–10.0 g/h · m² corresponding to 1.1–11.0 mm thickness reduction/year)

3 = no resistance to general corrosion (>10.0 g/h · m² corresponding to >11.0 mm thickness reduction/year) The following warning is provided for the major forms of localised corrosion

L = risk of pitting, crevice corrosion or stress-corrosion cracking, even in resistance class 0
